# 14

# **Mathematical Reasoning**

#### **Short Answer Type Questions**

**Q. 1** Which of the following sentences are statements? Justify

- (i) A triangle has three sides.
- (ii) 0 is a complex number.
- (iii) Sky is red.
- (iv) Every set is an infinite set.
- (v) 15 + 8 > 23.
- (vi) y + 9 = 7
- (vii) Where is your bag?
- (viii) Every square is a rectangle.
  - (ix) Sum of opposite angles of a cyclic quadrilateral is 180°.
  - $(x) \sin^2 x + \cos^2 x = 0$
- **Sol.** As we know, a statement is a sentence which is either true or false but not both simultaneously.
  - (i) It is true statement.
  - (ii) It is true statement.
  - (iii) It is false statement.
  - (iv) It is false statement.
  - (v) It is false statement.
  - (vi) y + 9 = 7

It is not considered as a statement, since the value of y is not given.

- (vii) It is a question, so it is not a statement.
- (viii) It is a true statement.
- (ix) It is true statement.
- (x) It is false statement.

#### **Q.2** Find the component statements of the following compound statements.

- (i) Number 7 is prime and odd.
- (ii) Chennai is in India and is the capital of Tamil Nadu.
- (iii) The number 100 is divisible by 3, 11 and 5.
- (iv) Chandigarh is the capital of Haryana and UP.
- (v)  $\sqrt{7}$  is a rational number or an irrational number.
- (vi) 0 is less than every positive integer and every negative integer.
- (vii) Plants use sunlight, water and carbon dioxide for photosynthesis.
- (viii) Two lines in a plane either intersect at one point or they are parallel.

miopperin

- (ix) A rectangle is a quadrilateral or a 5 sided polygon.
- **Sol.** (i) p : Number 7 is prime.
  - q : Number 7 is odd.
  - (ii) P: Chennai is in India.
    - q : Chennai is capital of Tamil Nadu.
  - (iii) p: 100 is divisible by 3.
    - q: 100 is divisible by 11.
    - r: 100 is divisible by 5.
  - (iv) p: Chandigarh is capital of Haryana.
    - q : Chandigarh is capital of UP.
  - (v)  $p:\sqrt{7}$  is a rational number.
    - $q:\sqrt{7}$  is an irrational number.
  - (vi) p: 0 is less than every positive integer.
    - q:0 is less than every negative integer.
  - (vii) p : Plants use sunlight for photosysthesis.
    - q: Plants use water for photosynthesis.
    - *r* : Plants use carbon dioxide for photosysthesis.
  - (viii) p : Two lines in a plane intersect at one point.
    - q: Two lines in a plane are parallel.
  - (ix) p: A rectangli, is a quadrilateral.
    - q: A rectangle is a 5-sided polygon.
- **Q. 3** Write the component statements of the following compound statements and check whether the compound statement is true or false.
  - (i) 57 is divisible by 2 or 3.
  - (ii) 24 is a multiple of 4 and 6.
  - (iii) All living things have two eyes and two legs.
  - (iv) 2 is an even number and a prime number.
- **Sol.** (i) Given compound statement is of the form '*pvq*'. Since, the statement '*pvq*' has the truth value *T* whenever either *p* or q or both have the truth value *T*.
  - So, it is true statement.

	Its component statements are		
	p: 57 is divisible by 2.	false]	
	q: 57 is divisible by 3.	[true]	
(ii)	Given compound statement is of the form $(p \land q)$ . Since, the statement $(p \land q)$ have truth value <i>T</i> whenever both <i>p</i> and <i>q</i> have the truth value <i>T</i> .	e the	
	So, it is a true statement.		
	Its component statements are		
	p : 24 is multiple of 4	[true]	
	q : 24 is multiple of 6.	[true]	
(iii)	It is a false statement. Since ' $p \land q$ ' has truth value <i>F</i> whenever either <i>p</i> or <i>q</i> or both the truth value <i>F</i> .	have	
	Its component statements are		
	ρ : All living things have two eyes.	false]	
	q : All living things have two legs.	false]	
(iv)	It is a true statement.		
	Its component statements are		
	p : 2 is an even number.	[true]	
	q : 2 is a prime number.	[true]	
•	×O×		
<ul> <li>Q. 4 Write the negative on the following simple statements.</li> <li>(i) The number 17 is prime.</li> <li>(ii) 2 + 7 = 6.</li> <li>(iii) Violets are blue.</li> <li>(iv) √5 is a rational number.</li> <li>(v) 2 is not a prime number.</li> <li>(vi) Every real number is an irrational number.</li> </ul>			
(vii) Cow has four legs.			
	<ul><li>(viii) A leap year has 366 days.</li><li>(ix) All similar triangles are congruent.</li></ul>		
	(x) Area of a circle is same as the perimeter of the circle.		
(ii) (iii)	The number 17 is not prime. $2 + 7 \neq 6$ . Violets are not blue. $\sqrt{5}$ is not a rational number.		

- (v) 2 is a prime number.
- (vi) Every real number is not an irrational number.
- (vii) Cow has not four legs.
- (viii) A leap year has not 366 days.
- (ix) There exist similar triangles which are not congruent.
- (x) Area of a circle is not same as the perimeter of the circle.

- 292
- **Q. 5** Translate the following statements into symbolic form
  - (i) Rahul passed in Hindi and English.
  - (ii) x and y are even integers.
  - (iii) 2, 3 and 6 are factors of 12.
  - (iv) Either x or x + 1 is an odd integer.
  - (v) A number is either divisible by 2 or 3.
  - (vi) Either x = 2 or x = 3 is a root of  $3x^2 x 10 = 0$ .
  - (vii) Students can take Hindi or English as an optional paper.

, itopper in

- Sol. (i) p : Rahul passed in Hindi.
  - q : Rahul passed in English.
  - $p \wedge q$ : Rahul passed in Hindi and English.
  - (ii) p: x is even integers.
    - q: y is even integers.
    - $p \cap q$ : x and y are even integers.
  - (iii) p : 2 is factor of 12.
    - q : 3 is factor of 12.
    - *r* : 6 is factor of 12.
    - $p \land q \land r$ : 2, 3 and 6 are factor of 12.
  - (iv) p: x is an odd integer.
    - q:(x + 1) is an odd integer.
    - $p \lor q$ : Either x or (x + 1) is an odd integer.
  - (v) p : A number is divisible by 2.
    - q: A number is divisible by 3.
    - $p \lor q$ : A number is either divisible by 2 or 3.
  - (vi) p: x = 2 is a root of  $3x^2 x 10 = 0$ .
    - q: x = 3 is a root of  $3x^2 x 10 = 0$ .
    - $p \lor q$ : Either x = 2 or x = 3 is a root of  $3x^2 x 10 = 0$ .
  - (vii) p : Students can take Hindi as an optional paper.
    - q : Students can take English as an optional subject.
    - $p \lor q$ : Students can take Hindi or English as an optional paper.
- **Q. 6** Write down the negation of following compound statements.
  - (i) All rational numbers are real and complex.
  - (ii) All real numbers are rationals or irrationals.
  - (iii) x = 2 and x = 3 are roots of the quadratic equation  $x^2 5x + 6 = 0$ .
  - (iv) A triangle has either 3-sides or 4-sides.
  - (v) 35 is a prime number or a composite number.
  - (vi) All prime integers are either even or odd.
  - (vii) |x| is equal to either x or -x.
  - (viii) 6 is divisible by 2 and 3.

#### **•** Thinking Process

Use (i)  $\sim (p \land q) = \sim p \lor \sim q$ (ii)  $\sim (p \lor q) = \sim p \land \sim q$ 

- **Sol.** (i) Let *p* : All rational numbers are real.
  - q : All rational numbers are complex.
  - $\sim p$  : All rational number are not real.
  - $\sim q$ : All rational numbers are not complex.
  - ~  $(p \land q)$ : All rational numbers are not real or not complex. [:: ~ $(p \land q) = p \lor \neg q$ ]
  - (ii) Let *p* : All real numbers are rationals.

q: All real numbers are irrational.

Then, the negation of the above statement is given by

 $\sim (p \lor q)$ : All real numbers are not rational and all real numbers are not irrational.

$$[\because \sim (p \lor q) = \sim p \land \sim q]$$

(iii) Let p: x = 2 is root of quadratic equation  $x^2 - 5x + 6 = 0$ 

q: x = 3 is root of quadratic equation  $x^2 - 5x + 6 = 0.$ 

Then, the negation of conjunction of above statement is given by

 $\sim (p \land q)$ : x = 2 is not a root of quadratic equation  $x^2 - 5x + 6 = 0$  or x = 3 is not a root of the quadratic equation  $x^2 - 5x + 6 = 0$ 

(iv) Let *p* : A triangle has 3-sides.

q : A triangle has 4-sides.

Then, negation of disjunction of the above statement is given by

 $\sim (p \lor q)$ : A triangle has neither 3-sides nor 4-sides.

(v) Let p: 35 is a prime number.

q: 35 is a composite number.

Then, negation of disjunction of the above statement is given by

 $\sim (p \lor q)$ : 35 is not a prime number and it is not a composite number.

(vi) Let p: All prime integers are even.

q : All prime integers are odd.

Then negation of disjunction of the above statement is given by

 $\sim (p \lor q)$ : All prime integers are not even and all prime integers are not odd.

(vii) Let p : |x| is equal to x.

q:|x| is equal to -x.

Then negation of disjunction of the above statement is given by

 $\sim (p \lor q) : |x|$  is not equal to x and it is not equal to -x.

(viii) Let p: 6 is divisible by 2.

q: 6 is divisible by 3.

Then, negation of conjunction of above statement is given by

 $\sim (p \land q)$ : 6 is not divisible by 2 or it is not divisible by 3

- **Q. 7** Rewrite each of the following statements in the form of conditional statements.
  - (i) The square of an odd number is odd.
  - (ii) You will get a sweet dish after the dinner.
  - (iii) You will fail, if you will not study.
  - (iv) The unit digit of an integer is 0 or 5, if it is divisible by 5.
  - (v) The square of a prime number is not prime.
  - (vi) 2b = a + c, if a, b and c are in AP.
- **Sol.** We know that, some of the common expressions of conditional statement  $p \rightarrow q$  are
  - (i) if p, then q
  - (ii) q if p
  - (iii) ponly if q
  - (iv) p is sufficient for q
  - (v) q is necesary for p
  - (vi)  $\sim q$  implies  $\sim p$
  - So, use above information to get the answer
  - (i) If the number is odd number, then its square is odd number.
  - (ii) If you take the dinner, then you will get sweet dish.
  - (iii) If you will not study, then you will fail.
  - (iv) If an integer is divisible by 5, then its unit digits are 0 or 5.
  - (v) If the number is prime, then its square is not prime.
  - (vi) If a, b and c are in AP, then 2b = a + c.
- **Q.** 8 Form the biconditional statement  $p \leftrightarrow q$ , where
  - (i) p: The unit digits of an integer is zero.
    - q : It is divisible by 5.
  - (ii) p : A natural number n is odd.q : Natural number n is not divisible by 2.
  - (iii) p: A triangle is an equilateral triangle.
    - q : All three sides of a triangle are equal.
- **Sol.** (i)  $p \leftrightarrow q$ : The unit digit of on integer is zero, if and only if it is divisible by 5.
  - (ii)  $p \leftrightarrow q$ : A natural number no odd if and only if it is not divisible by 2.
  - (iii)  $p \leftrightarrow q$ : A triangle is an equilateral triangle if and only if all three sides of triangle are equal.

- **Q. 9** Write down the contrapositive of the following statements.
  - (i) If x = y and y = 3, then x = 3.
  - (ii) If n is a natural number, then n is an integer.
  - (iii) If all three sides of a triangle are equal, then the triangle is equilateral.
  - (iv) If x and y are negative integers, then xy is positive.
  - (v) If natural number n is divisible by 6, then n is divisible by 2 and 3.
  - (vi) If it snows, then the weather will be cold.
  - (vii) If x is a real number such that 0 < x < 1, then  $x^2 < 1$ .

#### **Thinking Process**

We know that, the statement (~ q)  $\rightarrow$  (~ p) is called contrapositive of the statement  $p \rightarrow q$ .

- **Sol.** (i) If  $x \neq 3$ , then  $x \neq y$  or  $y \neq 3$ .
  - (ii) If *n* is not an integer, then it is not a natural number.
  - (iii) If the triangle is not equilateral, then all three sides of the triangle are not equal.
  - (iv) If xy is not positive integer, then either x or y is not negative integer.
  - (v) If natural number *n* is not divisible by 2 or 3, then *n* is not divisible by 6.
  - (vi) The weather will not be cold, if it does not snow.
  - (vii) If  $x^2 \neq 1$ , then x is not a real number such that 0 < x < 1.
- **Q. 10** Write down the converse of following statements.
  - (i) If a rectangle  $\mathcal{R}$  is a square, then R is a rhombus.
  - (ii) If today is Monday, then tomorrow is Tuesday.
  - (iii) If you go to Agra, then you must visit Taj Mahal.
  - (iv) If sum of squares of two sides of a triangle is equal to the square of third side of a triangle, then the triangle is right angled.
  - (v) If all three angles of a triangle are equal, then the triangle is equilateral.
  - (vi) If x : y = 3 : 2, then 2x = 3y.
  - (vii) If S is a cyclic quadrilateral, then the opposite angles of S are supplementary.
  - (viii) If x is zero, then x is neither positive nor negative.
    - (ix) If two triangles are similar, then the ratio of their corresponding sides are equal.

#### **•** Thinking Process

We know that , the converse of the statement " $p \rightarrow q$ " is " $(q) \rightarrow (p)$ ".

- **Sol.** (i) If thes rectangle R' is rhombus, then it is square.
  - (ii) If tomorrow is Tuesday, then today is Monday.
  - (iii) If you must visit Taj Mahal, you go to Agra.
  - (iv) If the triangle is right angle, then sum of squares of two sides of a triangle is equal to the square of third side.
  - (v) If the triangle is equilateral, then all three angles of triangle are equal.

(vi) If 2x = 3y, then x: y = 3:2

(vii) If the opposite angles of a quadrilateral are supplementary, then S is cyclic.

- (viii) If x is neither positive nor negative, then x is 0.
- (ix) If the ratio of corresponding sides of two triangles are equal, then triangles are similar.

#### **Q. 11** Identify the quantifiers in the following statements.

- (i) There exists a triangle which is not equilateral.
- (ii) For all real numbers x and y, xy = yx.
- (iii) There exists a real number which is not a rational number.
- (iv) For every natural number x, x + 1 is also a natural number.
- (v) For all real numbers x with x > 3,  $x^2$  is greater than 9.
- (vi) There exists a triangle which is not an isosceles triangle.
- (vii) For all negative integers x,  $x^3$  is also a negative integers.
- (viii) There exists a statement in above statements which is not true.
  - (ix) There exists an even prime number other than 2.
  - (x) There exists a real number x such that  $x^2 + 1 = 0$ .
- Sol. Quantifier are the phrases like 'There exist' and 'For every', 'For all' etc.
  - (i) There exists(ii) For all(iii) There exists(iv) For every(v) For all(vi) There exists(vii) For all(viii) There exists(ix) There exists(x) There exists

#### **Q.** 12 Prove by direct method that for any integer 'n', $n^3 - n$ is always even.

#### **Thinking Process**

We know that, in direct method to show a statement, if p then q is true, we assume p is true and show q is true i.e.,  $p \rightarrow q$ .

**Sol.** Here, two cases arise

Let 
$$n = 2K, K \in N$$
  
 $\Rightarrow$   $n^3 - n = (2K)^3 - (2K) = 2K (4K^2 - 1)$   
 $= 2 \lambda$ , where  $\lambda = K (4K^2 - 1)$ 

Thus,  $(n^3 - n)$  is even when *n* is even.

Case II When *n* is odd,

Let  

$$n = 2K + 1, K \in N$$

$$\Rightarrow n^{3} - n = (2K + 1)^{3} - (2K + 1)$$

$$= (2K + 1) [(2K + 1)^{2} - 1]$$

$$= (2K + 1) [4K^{2} + 1 + 4K - 1]$$

$$= (2K + 1) (4K^{2} + 4K)$$

$$= 4K (2K + 1) (K + 1)$$

$$= 2\mu, \text{ when } \mu = 2K (K + 1) (2K + 1)$$

Then,  $n^3 - n$  is even when *n* is odd.

So,  $n^3 - n$  is always even.

**Q.** 13 Check validity of the following statement.

(i) p: 125 is divisible by 5 and 7.

(ii) *q* : 131 is a multiple of 3 or 11.

**Sol.** (i) *p* : 125 is divisible by 5 and 7.

Let q: 125 is divisible by 5.

r: 125 is divisible by 7.

q is true, r is false.

 $\Rightarrow q \wedge r$  is false.

[since,  $p \land q$  has the truth value F (false) whenever either p or q or both have the truth value F.]

Hence, *p* is not valid.

(ii) *p*: 131 is a multiple of 3 or 11.

Let q: 131 is multiple of 3.

r: 131 is a multiple of 11.

p is true, r is false.

 $\Rightarrow p \lor r \text{ is true.}$ [since,  $p \lor q$  has the truth value T (true) whenever either p or q or both have the truth value T value T

Hence, q is valid.

### **Q.14** Prove the following statement by contradiction method *p* : The sum of an irrational number and a rational number is irrational.

**Sol.** Let *p* is false *i.e.*, sum of an irrational and a rational number is rational.

Let  $\sqrt{m}$  is irrational and n is rational number.  $\Rightarrow \qquad \sqrt{m} + n = r$  [rational]  $\Rightarrow \qquad \sqrt{m} = r - n$   $\sqrt{m}$  is irrational, where as (r - n) is rational. This is contradiction. Then, our supposition is wrong.

Hence, *p* is true.

## **Q.** 15 Prove by direct method that for any real number x, y if x = y, then $x^2 = y^2$ .

#### **•** Thinking Process

In direct method assume p is true and show q is true i.e.,  $p \Rightarrow q$ .

**Sol.** Let p: x = y,  $x, y \in R$ On squaring both sides,

$$x^{2} = y^{2} : q \qquad [say]$$

$$p \Rightarrow q$$

Hence, we have the result.

#### **Q.** 16 Using contrapositive method prove that, if $n^2$ is an even integer, then nis also an even integer.

#### **•** Thinking Process

In contrapositive method assume ~q is true and show ~p is true i.e., ~  $q \Rightarrow ~ p$ .

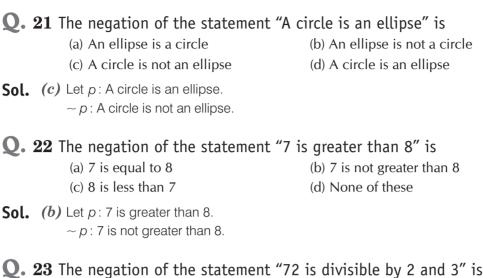

**Sol.** Let  $p: n^2$  is an even integer. q:n is also an even integer. Let  $\sim p$  is true *i.e.*, *n* is not an even integer.  $\Rightarrow n^2$  is not an even integer.  $\Rightarrow \sim p$  is true. Therefore,  $\sim q$  is true  $\Rightarrow \sim p$  is true.

[since, square of an odd integer is odd]

Hence proved.

#### **Objective Type Questions**

Q. 17 Which of the following is a stateme (a) <i>x</i> is a real number (b) Switch off the fan (c) 6 is a natural number (d) Let me go	ent?		
<b>Sol.</b> (c) As we know a statement is a sentence where So, 6 is a natural number, which is true. Hence, it is a statement.	nich is either true or false.		
Q. 18 Which of the following is not a statement. <ul> <li>(a) Smoking is injurious to health</li> <li>(b) 2 + 2 = 4</li> <li>(c) 2 is the only even prime number</li> <li>(d) Come here</li> </ul>			
<b>Sol.</b> ( <i>d</i> ) 'Come here' is not a statement. Since, no sentence can be called a statement, if it is an order.			
<b>Q.</b> 19 The connective in the statement $2 + 7 > 9$ or $2 + 7 < 9'$ is			
(a) and (c) > <b>Sol</b> (b) $\ln (2 + 7 > 0 \text{ or } 2 + 7 < 0')$ or is the compared	(b)or (d) <		
<b>Sol.</b> (b) In '2 + 7 > 9 or 2 + 7 < 9', or is the connective.			
Q. 20 The connective in the statement Moon is a satellite of earth" is (a) or (c) Sun	"Earth revolves round the Sun and (b) Earth (d) and		
Sol. (d) Connective word is 'and'.			

- - (a) 72 is not divisible by 2 or 72 is not divisible by 3
  - (b) 72 is not divisible by 2 and 72 is not divisible by 3
  - (c) 72 is divisible by 2 and 72 is not divisible by 3
  - (d) 72 is not divisible by 2 and 72 is divisible by 3
- **Sol.** (b) Let *p* : 72 is divisible by 2 and 3.
  - Let q: 72 is divisible by 2.
  - r: 72 is divisible by 3.
  - $\sim q$ : 72 is not divisible by 2.
  - $\sim$  r : 72 is not divisible by 3.
  - $\sim (q \wedge r) : \sim q \vee \sim r$
  - $\Rightarrow$  72 is not divisible by 2 or 72 is not divisible by 3.

#### **Q.** 24 The negation of the statement "Plants take in $CO_2$ and give out $O_2$ " is

- (a) Plants do not take in  $CO_2$  and do not given out  $O_2$
- (b) Plants do not take in CO<sub>2</sub> or do not give out O<sub>2</sub>
- (c) Plants take is  $CO_2$  and do not give out  $O_2$
- (d) Plants take in  $CO_2$  or do not give out  $O_2$
- **Sol.** (b) Let p: Plants take in CO<sub>2</sub> and give out O<sub>2</sub>.
  - Let q: Plants take in CO<sub>2</sub>.
  - r: Plants give out O<sub>2</sub>.
  - $\sim q$ : Plants do not take in CO<sub>2</sub>.
  - $\sim r$ : Plants do not give out O<sub>2</sub>.
  - ~  $(q \land r)$ : Plants do not take in CO<sub>2</sub> or do not give out O<sub>2</sub>.

#### ${f Q}$ . 25 The negative of the statement "Rajesh or Rajni lived in Bangaluru" is

- (a) Rajesh did not live in Bengaluru or Rajni lives in Bengaluru
- (b) Rajesh lives in Bengaluru and Rajni did not live in Bengaluru
- (c) Rajesh did not live in Bengaluru and Rajni did not live in Bengaluru
- (d) Rajesh did not live in Bengaluru or Rajni did not live in Bengaluru
